BRAKES

BRAKE UPGRADES

April 2021

COMPANY PROFILE

Performance Friction® brake calipers, discs and pads are manufactured in our state of the art production plant located in Clover, South Carolina. With world-class manufacturing processes in place, our 200,000 square foot, 400 plus employee facility supplies major automotive retailers, thousands of workshops and vehicle manufacturers in domestic and international markets. With offices in Europe, Australia, Mexico and Japan, Performance Friction® is able to stay connected to its customers around the world.

Performance Friction UK is the sales, distribution and technical support centre for EUROPE, providing assistance to a network of regional distributors throughout the EMEA (Europe, Middle East and Africa) region, from a 7,000 square foot facility, holding stock of over 2,000 product lines.

Street - It's Quieter, Stops Quicker and Lasts Longer. At Performance Friction® we don't just copy OE, we make it better. Whether you're driving a sports car, saloon, truck or recreational vehicle, we make application specific Z-Rated® Big Brake Kits, Carbon Metallic® brake pads and OE direct replacement Direct Drive™ discs. Our range of two-piece discs last longer and reduce vibration caused by thermal distortion and warping.

Fleet and Off-highway - Lower Cost Per Mile. Many leading operators rely on Performance Friction® discs and Carbon Metallic® brake pads to deliver the lowest cost per mile and highest durability in the industry. In the off-highway market Performance Friction® was the first brake pad supplier to produce an asbestos-free solution to stop a 300-ton truck at 35 mph.

Z-Rated® - It's Quicker, It's Cooler, It's Patented. Every year hundreds of major championships around the world are won with Performance Friction® Z-Rated® calipers, Direct Drive™ discs and Carbon Metallic® pads. What's our secret? No single attribute makes us the best. We engineer our calipers, discs and pads to work together as a system to give drivers superior control, the lowest lap times and unrivaled reliability.

At Performance Friction®, every employee has "passion for the product"

and it shows...

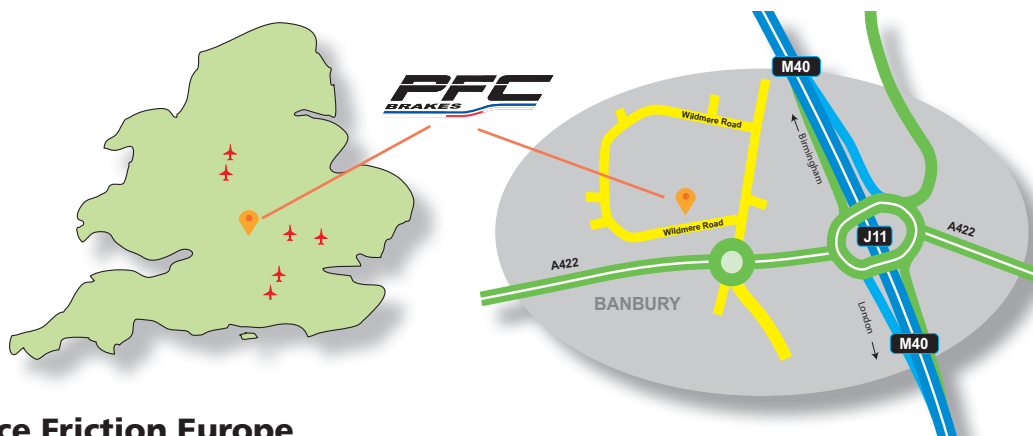

Performance Friction® continues to be the market leader wherever drivers demand unrivaled performance and quality, No Compromises™.

Our brake calipers, discs and pads outperform the competition in all markets, from professional racing to commercial fleets.

HOW TO FIND US

Our European Headquarters located at Banbury in Oxfordshire is extremely well serviced by road, rail and air transport.

Performance Friction Europe

Carbon Metallic House, Wildmere Road, Banbury, Oxfordshire OX16 3LU United Kingdom

Caliper Technology

The System...

The caliper, disc and pads work as a system: dynamically effecting bite, torque and release.

Performance Friction's improvements in pad and disc technology, combined with improvements in caliper design, result in exceptional performance and reliability.

Short Aspect Ratio 4-Piston Design for a stiffer caliper body, which reduces drag and temperature as well as improving release and control over 6-piston designs.

Integrated Piston dust Boots

High Tension Seals for proper piston rollback, which reduces drag and improves consistency.

High Temperature Aluminium Alloy for stiffness and improved pedal feel at the highest temperatures.

Monobloc Finite Element Analysis Design reduces caliper deflection for less pedal travel and improved response.

Abutment Design for optimized torque takeout, which improves release and control.

Integrated Bleeder and Bridge Pipe Guards.

Two-piece Bleeder Design protects against thread and seat damage.

Brake Pad Technology

The Latest in Brake Pad Technology for specific Severe Duty and High Performance Applications

Sports and Trackday – more stopping power and increased fade resistance for the high performance driver that demands better than OE to get the most from their high performance sports car.

- **More stopping power**
- **Fade resistant**
- **Quieter**
- **High pad life**
- **Lower disc wear**
- **Low dusting**

Multi-Layer Technology™

Each layer reduces brake noise by absorbing specific ranges of sound frequencies.

Layer 1 Vehicle specific formulated friction materials - this means exceptional stopping power over a longer performance life.

Layer 2 Enhanced material technology - exclusive underlayment - this means it isolates, dampens and reduces noise.

Layer 3 Exclusive Ionic Fusion™ bonding technology - this means dependable braking under severe conditions and it prevents delaminating.

Quality Steel Statistically controlled plates to ensure proper fit.

Visco-Elastic Shims Multi-Layer, noise insulating Visco-elastic shims are the final barrier to noise and vibration.

Patented graphite enhanced powder coating - prevents steel plate corrosion to improve pad life.

Z-Rated ® Carbon Metallic ® is denoted with a part number ending in .10 or .11
For example: BMW E46 M3 - 0394.11

Two-Piece Floating Direct Drive™ Street Upgrade Disc Technology

Ever since the disc brake was invented vibration and pulsation caused by thermal expansion (warped discs) has been a major issue.

Until Now...

With Performance Friction's two-piece floating Direct Drive and Direct Drive 'V2' disc assemblies, the disc flange floats in the bobbin structure, allowing radial and axial expansion of the disc without being constrained by the hub or hat.

Years of R&D and thousands of race miles have resulted in the development of PFC's Patented Direct Drive™ Systems.

Direct Drive™ uses a saddle bobbin as part of the mounting system.

Direct Drive V2™ is an integral drive in hat system and is a second generation disc mounting system designed to enhance the Z-Rated Big Brake kits by reducing the number of components and overall disc assembly weight.

Direct Drive V3™ is the very latest generation mounting system that uses a spiral locking ring that connects the disc to the hat - allowing much faster fitting without the need for tools or fixings, and producing even less overall weight.

A true two-piece floating race disc optimized for road and track duty.

Direct Drive

Direct Drive V2

Direct Drive V3

- Reduced thermal distortion and warping.
- No rattling – 100% silent operation.

- Reduced drag and increased mileage.
- Reusable hat/hub assembly.

Direct Drive™ Discs

1. High Carbon Alloy with copper and molybdenum for high temperature strength and durability.
2. Vanes turned OD and ID for balance to reduce thermal warping and vibration.
3. Run-out less than .001 inches, reducing pulsation and vibration.
4. Thickness variation less than .0003 inches reduces vibration.
5. 47 or more vanes for superior thermal capacity.
6. Aircraft quality heat-treated for microstructure alignment and durability.
7. Surface finishes less than .7 microns.
8. 100% measured and inspected to meet tolerance specifications.

The Result...

PFC Brakes outperform the competition by more efficiently distributing heat for lower lap times, longer life and improved driver control.
